

MV-IDH2000PB

Wireless Handheld Code Reader

Introduction

MV-IDH2000PB wireless handheld code reader decodes different types of 1D and 2D codes rapidly. With the built-in intelligent code reading algorithm, it can easily decoding codes with spots, defects and low contrast ratio, and entry level DPM codes. It also supports switching to white light, red light, or blue light, and supports polling of two-color or three-color light source, providing greater scene adaptability and enhanced code reading performance. With adaptive charging bases, the code reader can realize charging and data communication.
